

Mini-Assignment #1

David Lawlor NM_15

I developed the Signup page for our project called Budget Buddy. This website is made to manage personal finances.

I created a welcome page which asks the user to sign in or sign up. These pages were created using React and hooks. The signup page has fields for first name, last name, email, and password.

I also created a couple GitLab issues, branches, and merge requests to complete the assignments tasks.

This starting point will give us a good place for our upcoming tasks including adding the backend to the website.
